Outboard Service Manual Colored Diagrams

Models Affected

All new or revised Outboard Service Manuals

Situation

The colored diagrams for wiring, fuel flow, oil flow, and water flow that are currently part of outboard service manuals will now be supplied separate from the manual. As new manuals are developed or existing manuals are revised, separate diagrams will be created. The first mailing of separate colored diagrams is scheduled for the summer of 2006.

First Mailing

For the US and Canada, the first mailing is planned to include:

- One 3 inch wide 3-ring binder for storage of diagrams in one location
- Cover and spine sheet for the binder
- Tab divider sheets for diagram sets included in the first mailing
- Diagram set for 25/30 HP EFI FourStroke S/N 0R106999 and above
- Diagram set for 30/40 HP EFI FourStroke S/N 0T409000 and above
- Diagram set for 75/90/115 HP EFI FourStroke S/N 1B366823 and above

As diagram mailings are received, the dealer will be required to place the diagrams and tab sheets into the colored diagram binder in the correct location.

NOTE: *Tab sheets are only included with new diagram sets.*

Advantages of Separate Diagrams

- Diagrams can be supplied prior to the completion of the complete service manual.
- Extra or replacement diagram sets for each engine family can be ordered separately. Diagram sets will include all diagrams for that engine family. Diagram set part numbers will be listed in the service manual index.
- With the diagram in the folded position, the diagram description and part number can easily be viewed.
- Only the diagram required needs to be taken to a repair site rather than taking the complete service manual.
- Diagrams will have callouts listed in a number of different languages.
