# Tilt Pin Spiral Retaining Ring Inspection – 200/225/250/300/350 SCi Verado L6

# **Models Affected**

Models Covered	Serial Number Or Year
200/225/250/300 Verado L6	USA - 1B768046–2B029431
200/225/250/300 Verado L6	Belgium - 0P559709–0P587065
350 SCi Verado L6	USA - 1B920381–2B029431

# Scope

Worldwide

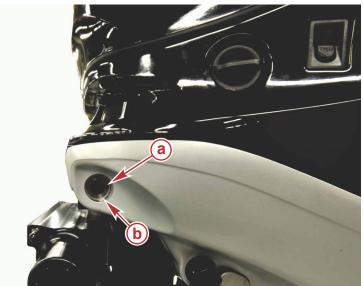

# Situation

Mercury Marine has been informed of a small number of instances where the tilt pin spiral retaining ring which secures the tilt pin into the mount cradle bore has not been fully installed. If the tilt pin spiral retaining ring is not fully seated into the ring groove in the tilt pin bore (port side of mount cradle) there is the potential for the tilt pin spiral retaining ring to become dislodged which could allow the tilt pin to move out of position. Mercury Marine has taken steps to assure that the tilt pin spiral retaining ring is fully seated into the tilt pin bore groove on all new products. Affected outboards will need to be inspected and, if necessary, corrected following the procedures outlined in this service bulletin.

# Correction

# TILT PIN SPIRAL RETAINING RING NOT FULLY SEATED

Use a small screwdriver or punch to push any unseated portions of the tilt pin spiral retaining ring into the groove in the tilt pin bore.

### TILT PIN SPIRAL RETAINING RING MISSING

- 1. If out of position, push the tilt tube into the tilt pin bore from the port side of the mount cradle to expose the groove in the tilt pin bore.
- 2. 350 SCi models: Verify that the tilt pin spacer is in position. Install a new spacer if it is missing.

a - Tilt pin spacer (350 SCi only)

- 3. Install a new tilt pin spiral retaining ring into the groove in the tilt pin bore.
  - a. Separate the inner end of the tilt pin spiral retaining ring and start (push) it into the tilt pin bore in the mount cradle.
  - b. Continue to push the inner end of the tilt pin spiral retaining ring into the tilt tube bore so that it begins to wrap into the groove in the tilt tube.

a - Inner end of tilt pin spiral retaining ring
