## QUICKSILVER PROPELLERS WITH BRASS HUBS

Future Quicksilver propellers will be equipped with a drive hub having a silicon brass sleeve (instead of aluminum) to resist corrosion and help prevent the propeller from seizing onto the propeller shaft. The implementation of the new hubs will occur as a running change with the part number suffixes being changed (i.e. A4 to A5, etc.) to indicate the utilization of the new hubs. The current part numbers will be superseded to the new part numbers as inventories of the current propellers are depleted. **CURRENT PART NUMBERS SHOULD BE USED WHEN ORDERING UNTIL SUPERCESSION OCCURS.**

As always, the propeller shaft should be liberally lubricated with one of the following Quicksilver Products, prior to propeller installation and periodically thereafter. Products are listed in order of effectiveness.

- Special Lubricant 101 - 92-79214A1
- 2-4-C Multi-Lube - 92-90018A2
- Perfect Seal - 92-34227
