THUNDERBOLT IV IGNITION KIT WITH REV LIMIT

New ignition kits have been introduced to replace the Firepower ignition, previously used on **MHP 465 / 500 / 525SC / 600SC** engines.

The new kits have Thunderbolt IV style systems with a new rev. limit module.

Kit part number **17316A2** is used on **465/500**

Kit part number **814295A2** is used on **525 SC**

Kit part number **817509A1** is used on **600 SC**

The Firepower systems have been discontinued and the above listed kits supercede.

Rev. limiters are set at 5400 for all engines except the 800 SC which is set at 5200.

All 800 SC engines were produced with the new ignition and for that reason there is no kit number.
