## SPORT JET (1993 Thru 1997) PISTON/RING CHART

The Sport Jet Piston Ring Chart is attached for your information. The chart was designed to help you identify the many pistons available, and the proper bore size. Do not attempt to use this chart to fit pistons in blocks that no longer have pistons available. Piston diameter, pin size and/or weight or piston shape may differ.

The chart starts with the horsepower and year and model letter or serial number of the engine. If the year you are looking for is not listed, the parts are no longer available.

Next comes the Standard bore size. Fractions are listed where possible. The decimals given are actual or original bore sizes of older engines and must be used accordingly when boring for oversize pistons. Failure to use the decimal given will constitute a stuck piston. All oversize pistons will have an instruction sheet containing these decimals, as per the piston part number for the older pistons.

The chart also lists the number of total rings and how many tapered rings used on that piston. And finally, a listing of all pistons and rings by part number available for the appropriate bore.

Some piston kits have been made into assemblies for use on the older engines. These are marked accordingly.

# SPORT JET (1993 Thru 1997) PISTON/RING CHART
